

## **ABSTRACT**

Most of the college students are found searching for notes of their lectures during exam time. Also providing notes during lectures are bit difficult for faculties. So, “**E-Notes**” brings the college students their subject notes to help them prepare for exams. These notes are prepared by the teachers or faculties. Student just need to register themselves on the website and provide some basic details after which they will be given access to download the notes they require. This will also save time for students spending a lot of their time in preparing notes from different books. The notes provided will be well organized. The website will be updated on a daily basis.

### **Software Requirements:**

Front end: PHP

Back end: MySQL

### **Hardware Requirements:**

Processor: I3 processor

Ram:4GB

OS:32-bit

## **INTRODUCTION**

In this fast-emerging trend of the world, everyone wants to save time and focus more on learning and educating themselves. E-notes is a web-based platform where students and faculties come together for collaborative learning. This website has been created with the help of PHP, HTML, JavaScript and CSS. MySQL has been used for the database.

E-notes is a such a website where teachers have to register for free. And then they need to upload the subject notes. On the other hand, students can also register for free. After the registration being done, they select the particular options to which they are prompted to and download the notes. This website has been created to meet the needs of the students as well teachers. In order to make the classrooms more discussion oriented, this website will help both the students and teachers. As a result of which, the time of both the teachers and the students will be saved.

## **FEASIBILITY STUDY**

In the conduct of feasibility study, three important tests of feasibility were taken:

### **Technical feasibility**

While performing the technical feasibility a number of technical issues arose. They are as follows:

1. Had the necessary technology existed to do what had been suggested (or it could be required)?
2. Did the proposed equipment have the technical capacity to hold the data required to use the new system?
3. Could the system be upgraded if developed?
4. Were there technical guarantees of accuracy, reliability, ease of access and data security?

### **Operational feasibility**

Operational feasibility study was conducted to sort out the problems mainly related to the human organizational and political aspects. Following points were considered to complete with the esteem of operational feasibility:

1. What changes would be brought by the system?
2. What new skills would be required? Did the staff members have these skills? If not, could they be trained in due course of time?
3. Would there be resistance from users that will undermine the possible application benefits?

### **Economical feasibility**

Economical feasibility study was conducted to find out whether the proposed system would be viable and effective. The following questions were made to test the system on the parameters of economy:

1. Were there sufficient benefits in creating the system to make the costs acceptable?
2. Was the cost of not creating the system so great that it was advisable to undertake the project.

## SRS

### **R1: Registration of Faculties/Teachers**

**Description:** This function helps the faculties/teachers to register to the website. It will store the information in the database. Each member will get a Teacher Unique Identification Number (TUIN) to further get access to the website.

**Input:** Registration Details

**Output:** TUIN

### **R2: Registration of Students**

**Description:** This function keeps the information about the details of students in the database. Each registered member will get a Student Unique Identification Number (SUIN) to get access to the website.

**Input:** Registration Details

**Output:** SUIN

### **R3: Download Notes**

**Description:** This function will prompt the student to the page where the students can get the download options after a student has logged in. It provides the required notes. To do so they need to provide the particular TUIN so as to download the notes.

**Input:** TUIN

**Output:** Note Downloaded Successfully.

### **R4: Uploading Notes**

**Description:** This function is available for the faculties/teachers those are registered. They can upload the notes in formats such as .doc, .ppt, .jpg etc.

**Input:** Upload notes

**Output:** Notes uploaded successfully or not.

### **R4: Search Notes**

**Description:** This function helps the students to search for the notes.

**Input:** search requirements

**Output:** Notes list

## Use case Diagram's Text description

**U1: Registration/Login:** Using this use case, the user can register to the website by providing the necessary details.

### Scenario 1: Mainline Sequence

1. Teacher : selects the register option
2. System: displays and prompts to enter the name, branch, and other necessary details.
3. Teacher: enters the details and gets a confirmation about the registration and gets the TEACHER UNIQUE IDENTIFICATION NUMBER (TUIN). Enters the email and password to login to the system.
4. System: displays the message "SUCCESSFULLY LOGGED IN" and prompts the user to enter the next option i.e., available on the screen.

### Scenario 2: Mainline Sequence

1. Student: selects the register option
2. System: displays and prompts to enter the name, branch, and other necessary details.
3. Student: enters the details and gets a confirmation about the registration and gets the STUDENT UNIQUE IDENTIFICATION NUMBER (SUIN). Enters the email and password to login to the system.
4. System: displays the message "SUCCESSFULLY LOGGED IN" and prompts the user to enter the next option i.e., available on the screen.

**U2: Upload Notes:** Using this use case, the Teacher will upload the subject notes.

### Scenario 1: Mainline Sequence

1. Teacher : selects the subject
2. System : displays the area for the particular subject that has been chosen
3. Teacher : Uploads the notes of the subject (in any of formats like doc, ppt , jpg etc.,)

4. System : prompts to save the notes for the usage of the students

**U3: Download Notes:** Using this use case, the Student can download the notes to prepare well.

Scenario 1: Mainline Sequence

1. Student: selects the download option
2. System: it prompts to enter the TUIN and semester
3. Student: selects the subject and clicks on view/download
4. System: processes the requests as according

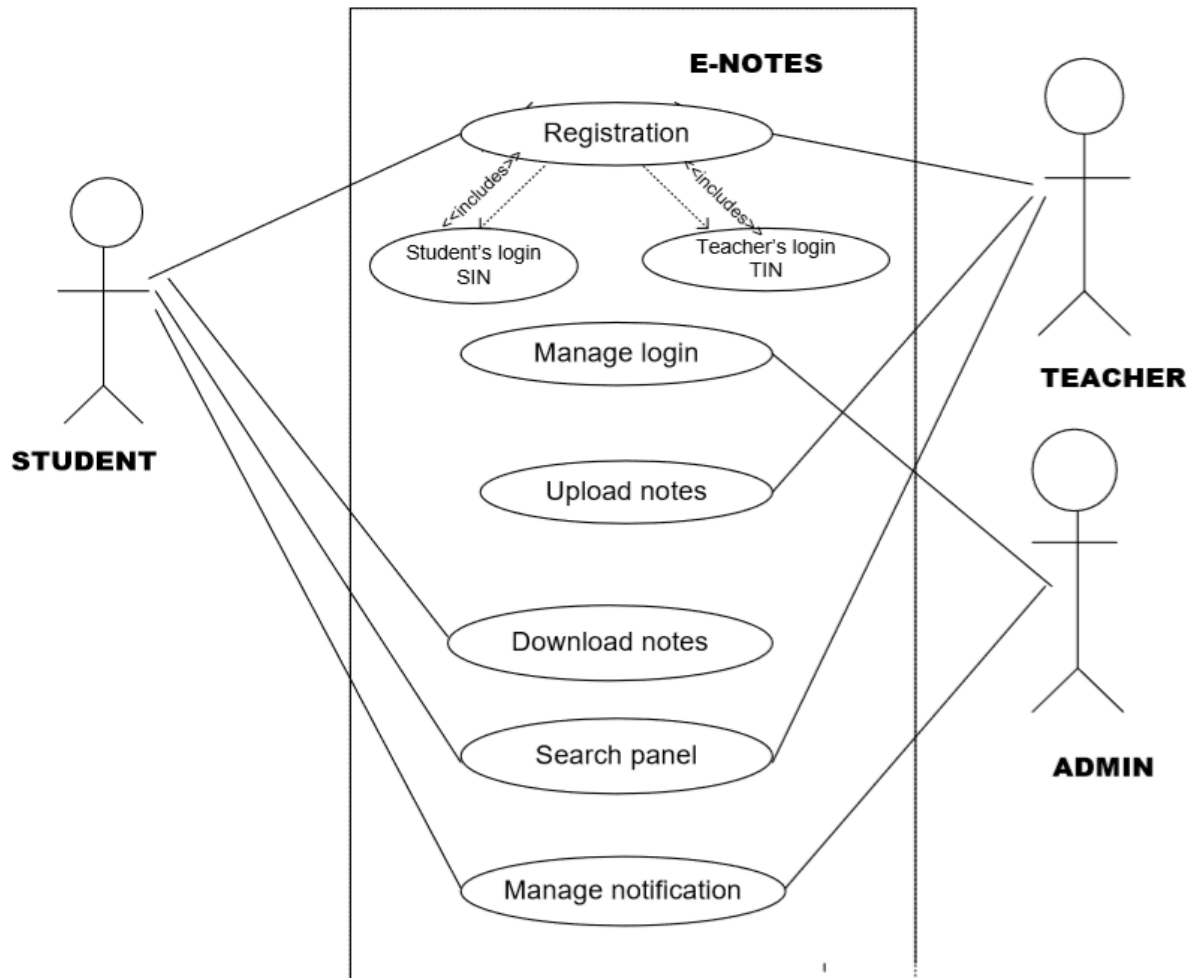

**U4: Search Panel:** Using this use case, the students can search the book names that the faculties prefer for the particular subjects, syllabus for the semester and suggested notes.

1. Student: types the requirements
2. System: displays the information

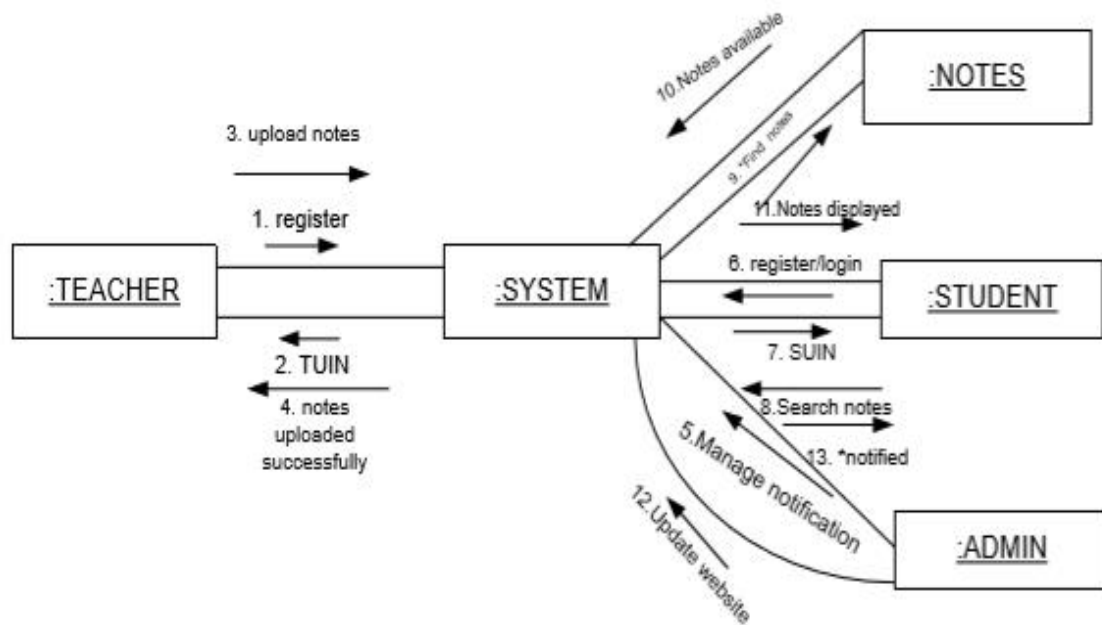

**U5: Notification Bar:** Using this use case, the student will get notification about college and suggested notes that get uploaded by the faculties from time to time.

Scenario 1: Mainline Sequence

1. Admin: Updates the page
2. System: notifies the students about the news
3. Student: clicks on the notification
4. System: shows the various notifications about the notes , books , important information

<p style="font-size:18px;text-align:justify; padding-left:30px;padding-right:30px;font-
family:Microsoft JhengHei Light;">

<big>E-Notes</big> is an expert-driven Learning Network, where students and
faculties come together for collaborative learning. Faculties can upload their subject
notes and study materials (both handwritten and in document- PPT,PDF,DOC etc.,
format) which students from Padmanava College of Engineering institutes can access
for free. E-Notes aims to make classrooms more discussion oriented increasing the
learning ability ,effectiveness and clear the concepts of the subjects by providing
notes through this website. E-Notes is a platform planned to be a
LEARN|GRASP|EDUCATE platform where users can learn by reading from notes
uploaded by the faculties.

### About Us

E-Notes is an expert-driven Learning Network, where students and faculties come together for collaborative learning. Faculties can upload their subject notes and study materials (both handwritten and in document- PPT,PDF,DOC etc., format) which students from Padmanava College of Engineering institutes can access for free. E-Notes aims to make classrooms more discussion oriented increasing the learning ability , effectiveness and clear the concepts of the subjects by providing notes through this website. E-Notes is a platform planned to be a LEARN|GRASP|EDUCATE platform where users can learn by reading from notes uploaded by the faculties.

## PRIVACY POLICY

We value the trust you place in us. That's why we insist upon the high standards for secure transactions and customer information policy. Please read the following statement to learn about our information gathering and dissemination practices.

**Note:** Our privacy policy is subject to change at any point of time without notice. To make sure you are aware of the same, please review this policy periodically.

By visiting <http://E-Notes.co.in> (Website) you agree to be bound by the terms and conditions of this Privacy Policy. If you do not agree please do not access our website. This Privacy Policy is incorporated into and subject to the Terms of Use.

### Collection of personal identifiable information

When you use our Website, we collect and store your personal information which is provided by you from time to time. Our primary goal in doing so is to provide you a safe, efficient, smooth and customized experience. This allows us to provide services and features that most likely meet your needs, and to customize our website to make your experience safer and easier. More importantly, while doing so we collect personal information from you that we consider necessary for achieving this purpose.

### Security Precautions:

Our Website has strict security measures in place to protect the loss, misuse, and alteration of the information under our control. Whenever you change or access your account information, we offer the use of a secure server. Once your information is in our possession, we adhere to strict security guidelines, protecting it against unauthorized access.

### Other information

Once the student registers on to the website, he/she gets a SUIN (Student Unique Identification Number) which is subject to the personal information provided by the student himself or herself and shall not refer to any other student. The website doesn't provide a duplicate SUIN. Each user can register can only once.

### Your Consent

By using the Website and/or by providing your information, you consent to the collection and the use of the information you disclose on the Website in accordance with the Privacy Policy, including but not limited to Your consent for sharing your information as per this privacy policy.

## **TESTING**

Software testing is an investigation conducted to provide stakeholders with information about the quality of the product or service under test. Software testing can also provide an objective, independent view of the software to allow the business to appreciate and understand the risks of software implementation. Test technique include the process of executing a program or application with the intent of finding software bugs (errors or other defects).

Software testing involves the execution of a software component or system component to evaluate one or more properties of interest. In general, these properties indicate the extent to which the component or system under test:

- Meets the requirements that guided its design and development
- Responds correctly to all kinds of inputs
- Performs its functions within an acceptable time
- Is sufficiently usable
- Achieves the general result its stakeholders desire

As the number of possible tests for even simple software components is practically infinite, all software testing uses more strategy to select tests that are feasible for the available time and resources. As a result, software testing typically (but not exclusively) attempts to execute a program or application with the intent of finding software bugs (errors or other defects). The job of testing is an interactive process as when one bug is fixed, it can illuminate other, deeper bugs, or even create new ones.

Software testing can provide objective, independent information about the quality of software and risk of its failure to users and/or sponsors.

Software testing can be conducted as soon as executable software (even if partially complete) exists. The overall approach to software development often determines when and how testing is conducted. For example, in a phased process, most testing occurs after system requirements have been defined and

then implemented in testable programs. In contrast, under an Agile approach, requirements, programming, and testing are often done concurrently.

### **Testing Phase:**

The testing phase involves the testing of the developed system using various kinds of data. An elaborated testing of data is prepared and a system is tested using the test data. While testing, errors are noted and corrections remade, the corrections are also noted for future use.

### **Software Testing:**

Testing is a set of activities that can be planned in advance and conducted systematically. The proposed system is tested in parallel with the software that consists of its own phases of analysis, implementation, testing and maintenance.

Following are the tests conducted on the system:

#### **UNIT TESTING:**

During the implementation of the system each module of the system was tested separately to uncover errors within its boundaries. User interface was used as a guide in the process.

#### **MODULE TESTING:**

A module is composed of various programs related to that module. Module testing is done to check the module functionality and interaction between units within a module. It checks the functionality of each program within the module. It then tests the overall functionality of each module.

#### **INTEGRATION TESTING:**

Integration testing is a systematic technique for constructing the program structure while conducting tests to uncover errors associated with interfacing. The objective is to take unit tested module and build a program structure that has dictated by design.

## **ACCEPTANCE TESTING:**

The software has been tested with the realistic data given by the client and produced fruitful results. The clients satisfying all the requirements specified by them has also developed the software within the time limitation specified. A documentation has been given to the client and the end-user giving all the operational features.

## **Implementation Phase:**

The implementation is the final and important phase. It involves user training, system training and successful running of the developed system. The users test the developed system when changes are made according to the needs. The testing phase involves the testing of the developed system using various kinds of data. An elaborate testing of the data is prepared and system is tested using the test data.

Implementation is the stage where theoretical design tuned into a working system. Implementation is planned carefully to propose system to avoid unanticipated problems. Many preparations involved before and during the implementation of the proposed system. The system needed to be plugged in to the organization's network then it could be accessed from anywhere, after a user logs in into the portal. The tasks that had to be done to implement the system were to create the database tables in the organization database domain. Then the administrator was granted his role so that the system could be accessed.

The next phase in the implementation was to educate the system. A demonstration of all the functions that can be carried out by the system was given to examination department person, who will make extensive use of the system.

## **MAINTENANCE**

Software maintenance is widely accepted part of SDLC now a days. It stands for all the modifications and updates done after the delivery of software product.

There are number of reasons, why modifications are required. Some of them are :

- **Market conditions:** Policies which changes over the time, such as taxation and newly introduced constraints like, how to maintain book keeping, may trigger need for modification.
- **Client Requirements:** Over the time, customer may ask for new features or functions in the software.
- **Host Modifications:** If any of the hardware and/or platform (such as operating system) of the target host changes, software changes are needed to keep adaptability.
- **Organization changes:** If there is any business level change at client end, such as reduction of organization strength, acquiring another company, organization venturing into new business, need to modify in the original software may arise.

### **Types of Maintenance:**

In a software lifetime, type of maintenance may vary based on its nature. It may be just a routine maintenance tasks as some bug discovered by some user or it may be a large event in itself based on maintenance size or nature. Following are some of the types of maintenance based on their characteristics:

- **Corrective Maintenance:** This includes modification and updates done in order to correct or fix problems, which are either discovered by user or concluded by user error reports.
- **Adaptive Maintenance:** This includes modifications and updates applied to keep the software product up-to-date and tuned to the ever-changing world of technology and business environment.

- **Perfective Maintenance:** This includes modifications and updates done in order to keep the software usable over long period of time. It includes new features, new user requirements for refining the software & improve its reliability and performance.
- **Preventive Maintenance:** This includes modifications and updates to prevent future problems of the software. It aims to attend problems, which are not significant at this moment but may cause serious issues in future.

## **FUTURE SCOPE**

The scope of the project is to the online website to regional platform. In future, this site will be the largest website for the subject notes. This website will imbibe the interest in the students to refer this website for all time purposes. On the other side faculties won't be wasting time in dictating the notes, rather they would rely upon the website through which their notes can reach the students well. Downloading will always be free.

## **CONCLUSION**

This project solves many problems of both the students and teachers, saving their time, as one can access it anytime and anywhere. Users can access a wide range of facilities by accessing through this website.
